## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 27-43 have been considered but are moot in view of the new ground(s) of rejection.

### ***Election/Restrictions***

Newly submitted claims 37-43 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: the claims are directed towards a combination of a method of making and a method of implanting the implant. The original claims were directed solely to the subcombination of implanting the implant

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 37-43 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 29 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The limitation wherein "the **associated support** is adapted to be configured in different lengths" was not described in the specification.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 27-36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 27, it is unclear whether the Applicant is claiming the implant is **made from** apophyseal bone or the implant comprises cortical bone formed into a **prosthetic** apophyseal ring.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 27 and 32-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boyd et al. (6,468,311). Boyd et al. discloses a spinal fusion device comprising: a fusion support made of cortical bone having a cross member with serrated surfaces that

can connect to an associated support (Fig. 7). Please note that the cross-member is interchangeable with others of different length and therefore can be "configured in different lengths. The implant is sized to fit substantially over the apophyseal ring (col. 4, line 66- col. 5, line 2). However Boyd et al. fails to disclose specific heights and sizes for the implant. It would have been obvious to one of ordinary skill in the art to combine the teaching of the implant having the claimed dimensions, which are known to encompass the size of most intervertebral discs, to the implant of Boyd et al. because Boyd et al. teaches that the implant is sized to fit in an intervertebral disc space (e.g. Fig. 14) just as the present invention is sized "to match the space available."

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
